

AMENDMENTS TO THE SPECIFICATION

Please add a new paragraph after paragraph 3 on page 3, as follows:

The device is explained in greater detail below with reference to a preferred exemplary embodiment on the basis of the drawings. The drawings are as follows:

Figure 1a shows an enlarged view of a portion of the embodiment of the device of Figure 1;

Please amend paragraph 5 on page 4 as follows:

A magazine 10, which contains marking bodies 11 in a given arrangement, is attached to a magazine retainer 12, in the exemplary embodiment, in the form of a magazine guide attached to the lateral side of the lateral forceps arm 5, and, in the exemplary embodiment, pushed up to a stop 13, so that boreholes 14 of the magazine 10 are in mutual alignment with pins 15. The pins 15 are attached to the medial forceps limb 4 and point towards the lateral forceps limb 5, on which the magazine 10 is attached by plug-on or push-on attachment. The pins 15 provide a concave tip (best seen in Figure 1A) to ensure that they do not slip sideways on the marking bodies 11, inserting them from the magazine 10 into a bone 20 in a defined position relative to one another, as described below.
